**Problem**

**Concept**
- Provide easy way to embed data in widget form into a website
- Widgets provide at-a-glance information from FindTheBest's databases

**Challenges**
- Purely client-side code (javascript, css & html)

**Who cares**
- Bloggers and Website Publishers

**Why they care**
- Visualizations
- Easy to configure

**Solution**

Create a widget builder that allows the user create a widget with FindTheBest data.

Provide an intuitive interface that helps the user to create a widget of any specific items.

**Technologies Used:**

- jQuery
- HTML5
- CSS3
- Backbone.js
- CoffeeScript

**What We Learned:**

- Agile/SCRUM
- Test-driven development
- MVC Framework
- Teamwork
- Importance of Usability Testing

**We're The Best**
