

Problem

There is no simple way to create and customize mobile web stores for the Magento e-commerce platform. This makes many e-commerce sites unusable from mobile devices.

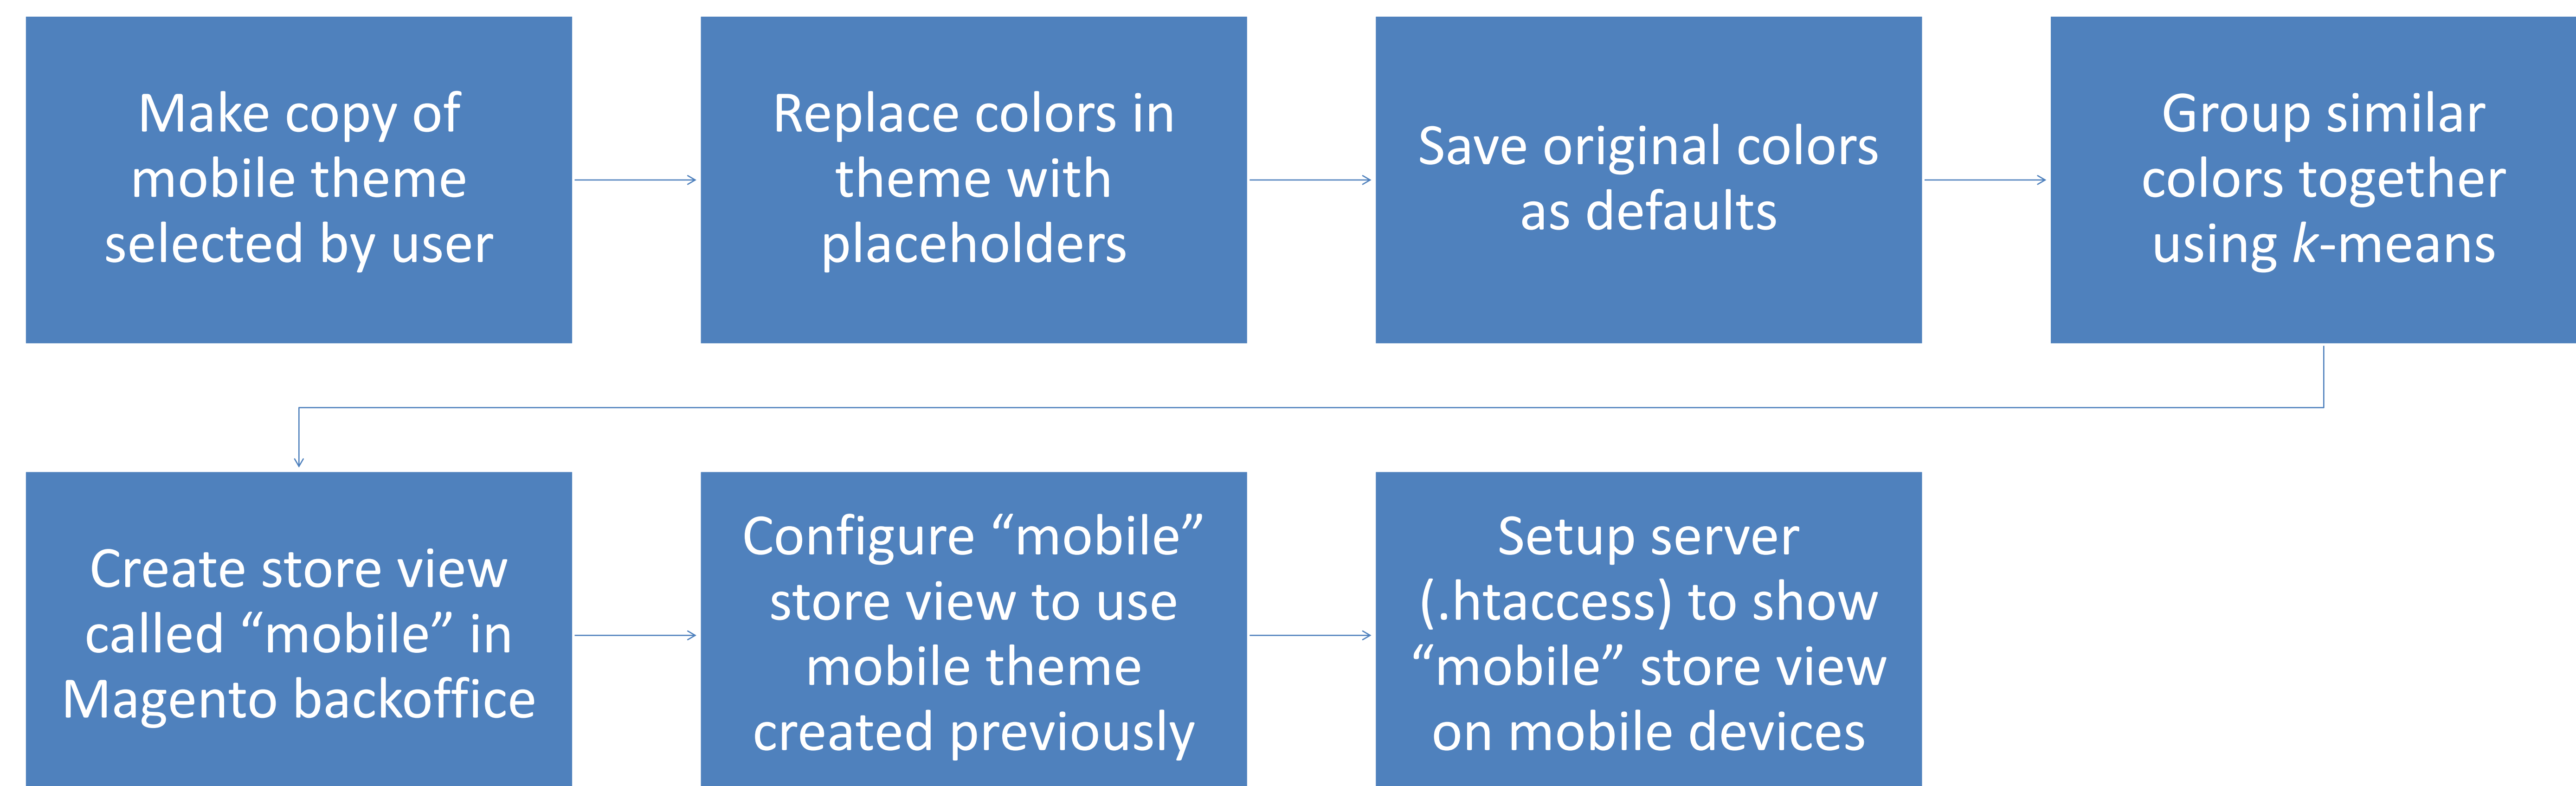

k-means

k-means is an algorithm that groups together similar data points. We use this algorithm to group similar colors in the user interface and allow the user to change them together.

Manual Steps to Create Mobile Site

The user can create a mobile site with one click, in 5 seconds, and customize its colors using our simple user interface.
